Name	Module	Secure Coding Practice	Design Pattern	Web Service	
				Provide	Consume
ZHAN ZHENG P	User Management	Authentication and password management			
		(1) Enforce account disabling after an established number of invalid login attempts	Factory Method		
		(2) If your application manages a credential store, use cryptographically strong one-way salted hashes			
ZHI FOOK CHU/	Course Management	Access Control			
		(1) Restrict access to protected functions to only authorized users	Builder		
		Output Encoding			
		(2) Contextually output encode all data returned to the client from untrusted sources			
GEN TECK NG	Enrollment Management	Access Control			
		(1) Enforce authorization controls on every request, including those made by server side scripts	Strategy		
		(2) Use a single site-wide component to check access authorization. This includes libraries that call external authorization services			
JIAN XIN OOI	Assessment & Progress Management	Error handling and logging			
		(1) Do not disclose sensitive information in error responses, including system details, session identifiers or account information	Observer		
		(2) Log all access control failures			
YIK HANG YIP	Notification Module	Session management			
		(1) Consistently utilize HTTPS rather than switching between HTTP to HTTPS	Command		
		Communication security			
		(2) Utilize TLS for connections to external systems that involve sensitive information or functions.
